TRANSFUSION MEDICINE AND CELL THERAPY

MEDICAL UNIVERSITY
OF VIENNA

Vienna Healthcare Group
University Hospital Vienna

CAR-T cells and gene therapies are revolutionizing medical science, offering potential cure for various cancers, autoimmune diseases, and genetic disorders.

The Vienna CAR-T Cell Club aims to bring together scientists and physicians with an interest in innovative cell and gene therapies, providing a platform for the exchange of experiences and data from basic research, translational concepts, and clinical practice. Our goal is to foster education, inspiration, networking, and collaboration – ultimately contributing to advancing the field for the benefit of patients in need.

The CAR-T Cell Club meets three times a year, with each meeting covering topics from basic research to translational efforts and clinical practice. If you would like to present, please let us know in advance. Colleagues, students, and friends are welcome!
